

LAB RESOURCE UTILIZATION PLATFORM

Document 3

User Roles and Permissions

Infosys Springboard Internship

1. Introduction

The Lab Resource Utilization Platform uses Role-Based Access Control (RBAC) to ensure that users can access only the features permitted for their responsibilities. Each user is assigned a role with predefined permissions.

2. User Roles and Responsibilities

Role	Responsibilities	Permissions
System Administrator	Manage the complete platform	Full access to all modules
Institution Administrator	Manage institution resources	Manage departments, users and equipment
Lab Manager	Manage laboratory operations	Approve bookings, manage equipment
Lab Technician	Maintain laboratory equipment	Update maintenance records
Researcher/Faculty	Reserve and use equipment	Create and manage bookings
Student	Use available laboratory resources	View and request equipment

3. Role-Based Access Summary

- Only authorized users can access the system.
- Each role has predefined permissions.
- Administrators manage users and resources.
- Lab Managers supervise bookings and equipment.
- Technicians maintain equipment records.
- Researchers and Students can request equipment based on availability.

4. Conclusion

Role-Based Access Control improves security, prevents unauthorized access, and ensures efficient management of laboratory resources.
